Volkmann Dedicated Test Lab

See how Volkmann can transfer your product with sanitary, safe, trouble-free dense phase vacuum conveying free of segregation, damage or abrasion at our vacuum system test facility located at our U.S headquarters in Bristol, PA. Here in this newly established 750 sq. ft dedicated test lab, we now have the ability to test all sizes of conveyors, and all but the very largest vacuum pumps, in house.

The lab features our VS200, VS250, VS350 and VS450 receivers in addition to a variety of feed hoppers including a RNT rip and tip hopper.

To better simulate real world applications, the lab features two 150 foot runs of 1½" and 2½" conveying lines plus the ability to add a 20 foot vertical lift. Clients can discuss what they are seeing in our lab conference area and also view a static display of our complete line of conveyors.
